DESCRIPTORS: *Oils, *Lubricants, *Alkanes, Separation, *Solvent extraction, Solvents, Liquid filters, *Mineral oils.

The lowest filtrate solidifying points are obtained with all the solvents suitable for deparaffination by work in the phase region; thereby the paraffin residue is very oleiferous. Oil-poor residues and unsatisfactory solidifying points are obtained only by work in the homogeneous region, whereby the proportion of solvent with the two-solvent process is put in so that one can filter with as low temperatures as necessary without phase (Materials--Lubricants, TT. v. 11, no. 11) (over)
